

HAKI® Stand

**When there's a queue of
spectators**

HAKI Stand – when you need more space at short notice!

Outdoors or indoors, standing or sitting, HAKI Stand is the perfect answer when you need a temporary stand at short notice. This flexible scaffold is easy to assemble and simple to move between various events.

Suppose you need a temporary stand for the football ground, a riding competition, the hockey hall, a festival or a concert. That's when HAKI Stand is the perfect answer – irrespective of whether you have a small number of spectators or several thousand. Thanks to its ingenious modular design, the stand is easy to divide into sections and adapt for different events. You can have any combination of standing and seating room. If you need more standing room then simply raise the seats to create more space. Furthermore the lowest level is easy to adapt for disabled people.

HAKI Universal rebuilt as stands

HAKI Stand uses the same basic components as in HAKI Universal. This multi-purpose modular scaffolding can be used for a wide range of applications and, thanks to its inbuilt diversity, is suitable for the majority of temporary constructions. All you need to create a temporary stand are a few special components. The scaffolding is easy to assemble, soon pays for itself and has a high trade-in value.

Easy to assemble with few components

HAKI Stand consists of basic components such as the base jack, standard, ledger beam, single tube beam, diagonal brace, steel plank, guardrail and safety gate. If you already use HAKI Universal, all you need to buy are six special components. These will provide you with comfortable seats, and steps that are easy to climb.

Safety

HAKI Stand is built from HAKI Universal, tried and tested scaffolding that meets the highest safety requirements. HAKI Universal has been approved by SP, the Technical Research Institute of Sweden.

Dimensions

The framework's modular dimensions give terraces that are 500 mm high and 770 to 1050 mm deep. Using our stand bracket, the step height is a convenient 250 mm. Lengthwise the stand is normally built with a section length of 3050 mm but lengths of 2500 and 1655 are also available.

Brace seating 1050

Locks the seats and makes the construction more stable.

Locking device seating

Locks the seats in the top row.

Seating grandstand

Available with 2 or 3 collapsible seats/section.

Bracket, grandstand

Supports the planks in the terraces and steps.

Riser grandstand 1655

Used as a guard on the steps.

Side guardrail grandstand 1050

Handrail and guard suitable for the steps.

Move the stand between different events

Football, swimming, motocross, concerts and festivals. The possibilities are unlimited. Our versatile stand can be used everywhere, year round – both indoors and outdoors.

The scaffolding can even be used where there are major differences in ground level, on a ski slope for example. The stand can be moved between different events such as from a football field to a sports hall or hockey arena. You soon get a return on your investment and make great savings.
